

5 SIMPLE WAYS

to IMPROVE Air QUALITY

CARPOOL

Whether to school or work, carpooling can mean more money in your pocket and more time with family. Try carpooling or taking public transit once or twice a month and avoid the stress of driving in winter weather.

TRIP CHAIN

Combining errands into 1 trip is more efficient and reduces traffic congestion and air pollution

A car that has been sitting one hour or more pollutes more than a car with a warm engine.

CARE FOR YOUR CAR

A well maintained car will pollute less and get better gas mileage. If your check engine light comes on and stays on take your car to a mechanic.

COLD STARTS

Cars are least efficient when starting a cold engine. To reduce emissions caused by cold starts, try teleworking, skipping the trip and carpooling. Did you know that driving your car will warm up your engine faster than idling? Lets all do our part to improve the air!

CHOOSE TO BIKE OR WALK!

When possible, try your bike as a transportation option. Biking and walking to nearby locations will help improve your health and the air.
